

**BIGFIX SOFTWARE LICENSE
MANAGEMENT****KEY FEATURES AND FUNCTIONS**

Get What You Pay For

BigFix Software License Management mobilizes BigFix real-time visibility to enable IT organizations to see and understand how software investments generate value—or not. Through timely and accurate reporting of software usage patterns, organizations can identify under-used licenses, identify over- and under-licensing conditions, and maintain an ongoing software inventory audit trail to support contract compliance, budgeting, and optimizing returns from software investments.

**KNOW WHO'S USING WHAT, HOW OFTEN, AND WHAT FOR
MAKE EVERY LICENSING DOLLAR COUNT****FEATURES**

- Real-time reporting of what software runs where, how often, and for what purposes
- Thorough views and reporting of versions, patch levels, configuration and utilization down to the individual PC level
- Reporting and analysis functions to support audits, ROI analysis, purchase/renewal negotiations, compliance programs, etc.
- Set and enforce policies to discourage or blacklist non-standard applications
- Identify and control inappropriate software usage

Make Know Your Software and How It's Being Used

- Identifies software installed on endpoint computers with full detail into version numbers, patch status, configuration, etc.
- Continuous metering of application usage
- Reporting and analysis functions to identify underused and unused licenses, under-licensing, automate true-up and auditing processes
- Non-intrusive real-time inventorying avoids service disruptions and risks to enterprise-wide scans and censuses
- Identify computers with redundant software applications
- Set and enforce policies against inappropriate software usage
- Blacklist dangerous or non-productive applications

DATA SHEET

BIGFIX SOFTWARE LICENSE MANAGEMENT

BENEFITS

- Stop spending money on un- or under-used licenses
- Cut cost and complexity of compliance reporting
- Reduce opportunities for disputes with software vendors and suppliers
- Lower security and business risks generated from inappropriate software
- Consolidate software license management with other BigFix-supported security and system management functions

BigFix Discovery 7 Platform Extends Vision, Capability, and Value

- The industry's first and only single agent/single console/single converged framework for enterprise-scale PC lifecycle configuration management and endpoint protection
- Real-time visibility and continuous control of all BigFix managed computers: fixed, mobile, laptop, desktop, server—Windows, Unix, Linux, and Mac OS
- On-demand policy-based services for instant-on, flexible solutions for IT asset management, power management, compliance, and security
- Scalable from 1,000 to 200,000+ endpoints with minimal dedicated hardware requirements—one \$5,000-10,000 server manages up to 200,000 endpoints
- Easy management, customization and extensibility through graphical dashboards, policy creation wizards and human-readable scripting
- Rapid installation—typically one day for basic functionality

Platform Availability

Available for desktop, server and mobile computers running Microsoft Windows 2000 and later versions.

Included in the BigFix Systems Lifecycle Management Pack or as an a-la-carte addition to the BigFix Discovery 7 Platform.

BigFix: Revolutionary Technology, Breakthrough Economics

BigFix®, Inc. offers the only real-time converged PC and server lifecycle configuration and endpoint protection framework that enables organizations to see, change, and enforce IT policies in real-time at global scale. Designed for highly distributed and complex IT infrastructures, BigFix delivers real-time endpoint visibility and control through its single-agent/single console, multi-function, on-demand architecture. Its award-winning technology is proven in production in 65 percent of Wall Street financial institutions, the world's leading retailer, one of the world's largest private health care institutions, and numerous federal, state, local, civilian and defense, agencies and educational institutions.
