

# A COMPLETE SET OF INTEGRATED MANAGEMENT TOOLS FOR COST-EFFECTIVE, PROACTIVE ENDPOINT PROTECTION

## SOLUTION COMPONENTS

### Trend Micro Core Protection Module

Prevent damage from viruses, Trojans, worms, and other new malware variants, including blended threats. Cloud-client architecture uses Web, E-mail, and File Reputation in the Trend Micro Smart Protection Network to detect and block malware.

### BigFix Client Manager for Endpoint Protection

Enable management of third-party endpoint security clients from vendors such as CA, IBM, McAfee, and Symantec. Provide a single point of management and reporting across multiple anti-malware providers.

### BigFix Endpoint Firewall and NAC

Protect endpoints and networks with an integrated endpoint firewall and network access control strategy that keeps endpoints secure off the network, ensuring a quick admission process when users connect.

### BigFix Network Access Control

Extend third-party solutions from vendors such as Cisco or Microsoft or use BigFix NAC to prevent insecure endpoints from connecting to the network. Minimize end-user impact with continuous compliance, off-network security and patch updates, and pre- and post-admission health checks.

### Device Control

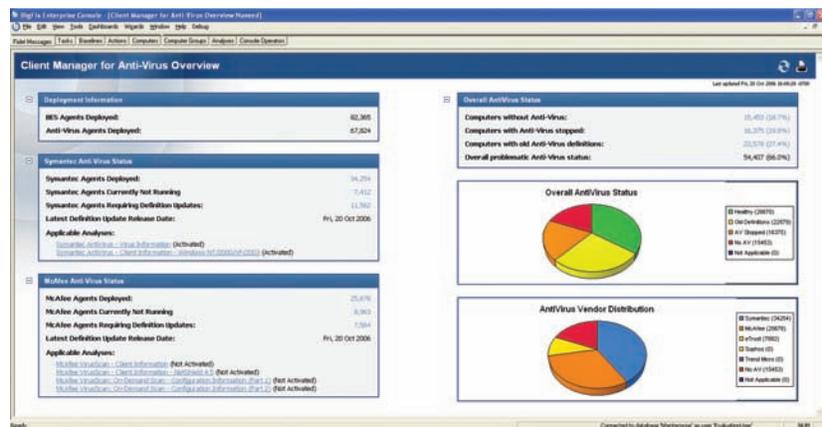

Visibility and control over portable devices connected to BigFix-managed endpoints to balance end user needs with data protection.

## Unified Management and Reporting for Multi-layered Endpoint Protection

Today's threat landscape requires organizations to go well beyond anti-virus updates to protect endpoints and the data they contain. Organizations have gradually added layers of protection which too often impact end-user productivity with multiple agents, long boot-ups, and access delays. In addition, lack of visibility across the entire network leaves a coverage gap—on average up to fifteen percent of endpoints are not protected or the protection is out-of-date.

BigFix brings together world-class anti-malware from Trend Micro with multi-vendor management, endpoint firewall management, network access control, and removable device control under a single infrastructure. This means one management and reporting console, one management server, and one endpoint agent.

With BigFix, you get true enterprise visibility, patented dynamic network bandwidth controls, and endpoint CPU utilization controls to minimize end user impact. This single infrastructure also extends to other BigFix security and systems management capabilities such as patching, security configuration and vulnerability management, software asset management, and even power management for a complete picture of the endpoint.

Manage and report across vendors and protection types—anti-malware, web access, endpoint firewall, network access control.

## SYSTEM AND SERVER REQUIREMENTS

### Supported Operating Systems for BigFix Server

- Windows 2000 Server SP 2+/2003/2008

### Database Requirements for BigFix Server

- SQL Server 2000 SP4/2005

### Supported Operating Systems for BigFix Console

- Windows XP/2000/2003 Vista/2008

## SUPPORTED CLIENT PLATFORMS

### For BigFix Agent

All of the following:

- Windows XP
- Windows 2000
- Windows 2003
- Windows Vista
- Windows 2008

### About BigFix

BigFix®, Inc. is a leading provider of high-performance enterprise systems and security management solutions that revolutionizes the way IT organizations manage and secure their computing infrastructures.

### About Trend Micro

Trend Micro, a global leader in Internet content security focuses on securing the exchange of digital information for businesses and consumers.

## Product Benefits

- Close the typical 8–15 percent endpoint protection coverage gap and get unmatched manageability and speed
- Prevent infection, identity theft, data loss, network downtime, lost productivity, and compliance violations
- Eliminate the security gap with real-time threat intelligence, minimizing the time to protection at the endpoint
- Replace existing anti-malware solutions cleanly and quickly with pre-packaged “one-click” removal capabilities
- Achieve unparalleled visibility into your endpoints for complete protection across your entire enterprise
- Minimize hardware, software, and administration costs by supporting 250,000+ endpoints across the globe with a single management server
- Combine endpoint protection, security configuration, patch management, and systems lifecycle management tools
- Realize rapid time to value—full deployment within hours or days and collapse management actions to minutes

## Product Features

- Delivers powerful protection against viruses, trojans, worms, and new variants as they emerge
- Incorporates threat intelligence gathered through Trend Micro’s extensive global network of honeypots, submissions, feedback loops, Web crawling technologies, customers, partners and TrendLabs threat research
- Manages multiple endpoint protection services such as CA, IBM, McAfee, and Symantec
- Assesses and enforces removable device control policies on any fixed or mobile asset without requiring network connectivity
- Monitors endpoint health and status, including anti-malware services and processes, enforcing policies to prevent users from disabling protections
- Provides role-based access and centralized management of complete endpoint protection across the entire enterprise
- Enforces policies when endpoints are off the network for continuous protection
- Reports status securely and requests relevant updates anytime endpoints connect to the Internet or other wide area network to ensure compliance before reconnecting to company network
- Applies closed-loop verification of updates on all endpoints
